Hi Chris – thanks so much for your prompt response to this! I think the changes look great and I am going to input them now. I agree – it's always good to take a look at the pages and think about how we can make them more user friendly. I think we did a pretty decent job with  in the past, but honestly, we could always take another look at it as I'm sure it can always be improved.

Hope you are staying safe with the snow and thanks again!

Gina,

See attached. I moved some things around and generally removed a lot of the clumsy operable unit descriptions. I think it should flow a lot better for the average citizen.

I added a hyperlink to the most recent FYR in SEMSPUB.

It might not bad to get together at some point after the page is updated to see what else could be improved. My understanding is that CI had a deadline by which it wanted all site pages updated, but I have been seeking to update the pages for my sites anyway to make them more user-friendly to the general public.

Let me know what you think.

Thanks! – Chris

Gina – I'm making edits now. I heard the office is closing so if you're in I might not beat you to the door! I understand this might be needed by tomorrow, so I'll be done soon (if you have a chance to check later).

Also, lead isn't a COC for Keystone. For those sites that are – and I don't think this is being completely communicated – I believe the concern is residential in nature and associated with lead paint. I believe this might be the origin of the rapid-turnaround request: <https://www.nytimes.com/2017/12/27/us/epa-lead-paint.html>

Whatever the case, I agree with the need to update the page and will have something shortly for you. If in, get home safe! I'm at home, but working.

Thanks! – Chris

Subject: ACTION - Input on Revisions to Keystone Sanitation Landfill Profile Page

Hi Chris – Happy New Year! Hope you enjoyed the holidays with your family.

It appears there was an inquiry from DOJ regarding Sites that contain lead, which has caused management to ask us to review all Sites with that contaminant. I was asked to review the Site webpages for Keystone Sanitation Landfill. It is probably a good thing because in looking at the page, the information needs some updating.

I took text from the main sections and put them in a word document and provided my suggested edits. When you have a moment, please look them over and provide any edits you feel are necessary. If you don't agree with some of the edits I'm proposing, that's fine – just let me know what you think.

I really appreciate your help to get this page updated!

Please let me know if you have any questions.

Thanks!
